

# The soluzione AI Driver's License (KI Führerschein®)

Protect investments and data and comply with the EU AI Act.

## Make your employees AI-ready with soluzione's AI Driver's License (KI Führerschein®).

You will gain the skills to competently use AI systems and understand the associated opportunities, risks, and potential damage - always in compliance with relevant regulations. Our e-learning courses are the first building block of our AI approach, enabling you to gain in-depth knowledge and increase your own AI readiness. However, companies should not rest until they have conducted tests to verify that the AI knowledge has reached the workforce.

Similar to a real driver's license, you can gain control over artificial intelligence and steer it in the desired direction. We offer you a unique solution that is not yet available on the market. The solution bridges the gap between the growing demand for AI skills with integrated tests and certificates.

### Investment Protection

Minimize the risk when purchasing expensive licenses

### Security

Protect your sensitive data

### Compliance

Comply with EU regulations

## AI readiness for your company

- Fulfill the training obligation from the European-AI Act!
- Reduce fears and create understanding for safety aspects as well as opportunities and risks of AI!
- Utilize the full productivity potential of artificial intelligence!
- Make your workforce fit for the use of artificial intelligence!

## The European Parliament's new AI Act

The European Parliament's new AI Act Regulation highlights the need for our AI Driving License (KI Führerschein®) for companies. According to Article 3, paragraph 56, AI competence must be defined - i.e. the ability to use AI systems competently and to be aware of the opportunities and risks. Article 4 requires providers and operators to ensure that their staff have sufficient AI competence. Our e-learning courses address this issue and are specifically designed to meet these requirements and provide your staff with the necessary skills.

## Theoretical Driving Test: Our Tests & Certificates

Each soluzione e-learning module can be completed by means of a test:

- We define an entertaining pool of questions. From this, 10-15 questions are randomly selected to cover the content of each sub-chapter.
- You define the further test modalities. When is it considered passed? How often can it be repeated? Is the test compulsory or voluntary?

On request, successful users will receive a certificate - this motivates them and serves as proof of compliance.

You can find information on the new course module on our website: <https://soluzione.de/ki-fuehrerschein/>
