The soluzione AI driver's license ®

Protect investments and data and comply with the EU AI Act.

With our AI driver's license®, your employees become AI-ready. You will learn to use AI systems competently and to understand the associated opportunities and risks – always in accordance with the relevant regulations.

AI training obligation according to the EU AI Act

The EU regulation on artificial intelligence, which has already come into force, has an important deadline: starting February 2025, it will stipulate a training obligation for all companies that use AI systems.

This is to ensure that employees not only have technical know-how, but also a sound understanding of the ethical and legal framework. Companies must document the training measures and update them regularly in order to be able to prove compliance with the legal requirements.

Comply with compliance obligations with the basic course of the AI driving license ®

Our soluzione AI driver's license ® has been tested by the renowned law firm reuschlaw against the requirements of the European AI Regulation.

In the **basic course: Working with AI,** all relevant topics – such as the competent use of AI systems, data protection, risk management and ethical principles of responsible AI – are dealt with in a necessary and comprehensive manner.

Theoretical driving test: our tests & certificates

However, more is needed to achieve an increase in efficiency and ensure the sustainable use of AI solutions. That's why we also offer **extensions** for our AI driver's license®, which you can optionally book:

- AI for Management
- Copilot Chat
- Copilot in M365

Each of these soluzione e-learning modules can be completed with a test and certificate. We define an entertaining question pool, from which 10-15 questions are randomly compiled - you define the further test modalities.

Information about the new course module can be found on our website: https://soluzione.de/en/ai-driver/ /

AI readiness for your business

- Fulfill the training obligation under the European AI Act.
- Reduce fears and create an understanding of security aspects as well as opportunities and risks of AI.
- Empower your workforce to use AI and unlock the full productivity potential.

Investment Protection
Minimize the risk when purchasing expensive licenses

Security
Protect your sensitive data
